Room / point sketch

Instruments / modes / units

Temperature unit: °C / °F

Date / time	Measurement point	Air temp.	Air RH (%)	Surface temp.	Material reading + units	Weather, room use and visible changes

Measure indoors and outdoors close together in time when comparing air. Note rain, windows, heating, laundry and ventilation.

A single reading does not identify the cause of damp or prove readiness for a finish. Check the measurement method required for the material.
